

Roller Crusher

MRCR

The ABC Hansen maize crusher is a simple roller crusher for breaking maize kernels and pellets, using 2 x 250mmØ x 200mm wide rollers – one driven and one free running

The roller crusher is used mainly as an alternative to a hammer mill, especially in operations where a minimum of dust and fines is required in the final product, such as when making chicken feed (chick-chick) or cattle rations, or when crumbling pelleted feed for feeding to smaller animals.

The crusher can also be used, using smooth rolls, and by putting a drive on the lagging roller, to roll oats or similar products.

The crusher offers – low power consumption for high capacity, adjustable rollers, durable, long lasting rollers, low dust and noise levels, and the rollers can be sharpened repeatedly.

Capacity	500-1300kg/hr
Number of rollers	2
Motor power	4KW
Weight	±300kg
Size of rollers	250mmØ x 200mm
Length	1000mm
Width	596mm
Height	1935mm
